

How do I select a printer in OS X?

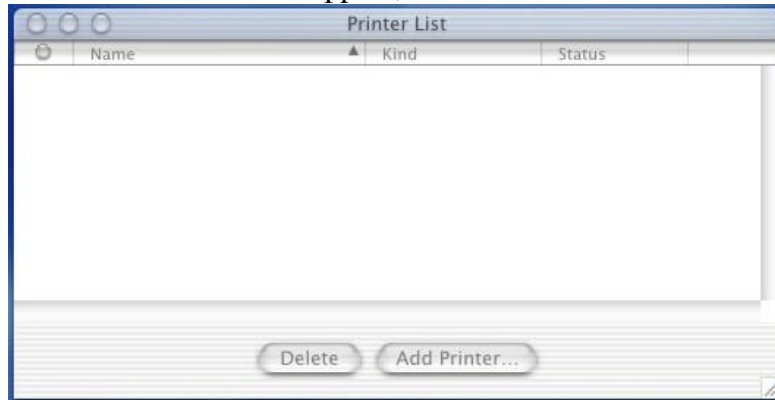

- 1) Double click on Macintosh HD (or the name of the computer) on the desktop

- 2) Navigate to Macintosh HD→Applications→Utilities→Print Center or Printer Setup Utility. (Whether it's the Print Center or Printer Setup Utility depends on which OS X version you have installed.) Launch Print Center or Printer Setup Utility by double clicking on the icon

- 3) The Printer List window should appear, click on the Add Printer button.

- 4) Make sure Apple Talk and the appropriate zone are selected (Apple Talk must be turned on). Use a single click to highlight the desired printer and click Add Printer.
